Renewal of Licenses to Provide Microwave)
Service In the 38.6 – 40.0 GHz Band)
)

ERRATUM

Released: March 26, 2002

By the Deputy Chief, Public Safety and Private Wireless Division:

1. This erratum amends the *39 GHz Order* released on March 7, 2002, DA 02-551, to remove the following renewal applications for stations operating in the 38.6-40.GHz band: FCC File No. 0000351676 (Station WMT808, Norfolk, VA); FCC File No. 0000350468 (Station WPJC408, Parkersburg, WV); and FCC File No. 0000351029 (Station WPJC417, Wheeling, WV). These renewal applications were inadvertently put in the appendices through clerical error. We note that FCC File No. 0000351676 (Station WMT808, Norfolk, VA) remains pending. We further note that FCC File No. 0000350468 (Station WPJC408, Parkersburg, WV); and FCC File No. 0000351029 (Station WPJC417, Wheeling, WV) have been dismissed.

2. This erratum also amends paragraph 10 of the order. The revised paragraph reads:

10. *Licensees operating at 50% or better of the Commission Example of Substantial Service.* The applications listed in Appendix A were filed by licensees operating within 50% of the Commission example of one link per 250,000 population. In the thirty-four months these licensees operated under the substantial service standard, they established viable operations, developed market plans, secured necessary financing, accommodated equipment manufacturers' production schedules and built a customer base in each market providing service at a level of approximately one link per 500,000 population. This level of service in such a short time demonstrates that the licensees are using the spectrum to provide service."
